

E85 Compact Excavator

Reference:195721

Description:

Performance and comfort in a compact package

- Spacious cab
- Excellent visibility
- reduced tail swing
- LCD monitor in the front
- Increased breakout of Forces
- Flexible Hydraulic Controls

The Bobcat E85 excavator is a compact excavator in reduced tail swing with a operating weight of about 8.5 tonnes. It is the largest compact excavator Bobcat range. This model has a spacious cabin for greater operator comfort and a powerful hydraulic system suitable for the most demanding applications.

To meet the needs of our customers, this model offers optional steel tracks, a long arm with additional counterweight, a load holding valve blade cylinder and a third auxiliary hydraulic line.

Articulated boom now optional

The working of the kinematic machine with an articulated boom is greater than that of a machine with arrow (monobloc) standard.

upper working kinematics

Increased range greater discharge height

Digging closer to the machine

The shovel can evolve more easily in tight spaces

With the best collection capacity, more debris may be pushed into the trench, and the work area can be cleaned faster, allowing the end to reduce the working time.

Increased lifting capacity, the counterweight having a top weight of 400 kg counterweight to that of a standard machine.

This machine can also be ordered with the optional articulated jib, which greatly enhances its versatility and performance
